

China Medical University Hospital

China Medical University Hospital (CMUH) is the largest medical center in Central Taiwan, providing top-tier, patient-centered care for a metropolitan area of 2.84 million people. Our Breast Medical Center offers a comprehensive "one-stop" service for screening, diagnosis, and personalized treatment.

Treatment strategies are formulated by a multidisciplinary core team consisting of breast surgeons, hematologists, radiation oncologists, pathologists, radiologists, and specialized nurses. Advanced breast and reconstructive surgeries are conducted in state-of-the-art operating rooms.

A key highlight of our facility is the integration of Traditional Chinese Medicine (TCM). CMUH is a leader in Taiwan for its modernization of TCM, which is deeply integrated into breast cancer care. We have established a dedicated TCM Breast Cancer Clinic within the Breast Surgery department of the Cancer Center Building. This allows patients to receive both Western and TCM consultations in a single visit, ensuring maximum convenience.

Furthermore, the CMUH Proton Therapy Center, launched in July 2024, represents a new milestone in precision oncology as the first of its kind in Central Taiwan. CMUH remains a hub for innovation, currently hosting over 20 international clinical trials and operating a dedicated Cell Therapy Center. Under the leadership of internationally renowned experts, the hospital continues to bridge basic research with clinical excellence to develop the next generation of cancer therapies.

Special Features and Highlights of Breast Cancer Treatment

1. The CMUH Breast Medical Center is a leader in performing a high volume of advanced oncoplastic surgeries, including endoscopic reconstructions and various minimally invasive breast surgeries, in state-of-the-art operating rooms.
